 **Cronus**[®]

Easy to clean insulation board

Cronus[®]: well insulated, easily cleaned

► Create a quality environment for your animals and crops

Animal welfare is much more than just ethics. It is dependent on many factors, one of which is ambient temperature. Temperature has a tremendous impact on animal health, as well as on their growth and productivity.

The best way to achieve these goals is to insulate with the best possible insulation material for your stables and buildings. Not only will this lead to better results, it will allow you to better control costs in terms of feed and energy.

By choosing Recticel Insulation as your partner, you will benefit from our long-standing know-how and expertise. Together we select the perfect solution for your project.

► All-in-one solution

Our Cronus[®] insulation boards are suitable for all sorts of livestock: cattle, pigs and piglets, poultry, sheep, goats, etc. and for all sorts of storage buildings, in particular for potatoes. Whatever your specific needs, Cronus[®] boards always stand for energy cost reduction, a controlled and stabilised inside temperature all year long, more comfort

for your animals and improved working conditions for yourself. Cronus[®] also allows for a healthier environment through better ventilation in the case of poultry and pig breeding. Light diffusion will also be improved. Finally, better storage conditions will drastically reduce losses in your buildings and other storage facilities.

“Cronus[®] insulation boards allow for perfect cleaning”

“Hygiene is very important in the dairy sector. Legislation and directives are incredibly strict. This applies in particular to the cleaning of all areas of the cowsheds. Cronus[®] proved to be the most convenient solution for us. The insulation boards are doing a perfect job insulating the roof, they also allow for thorough cleaning with a high-pressure cleaner.”

Piet W., dairy farmer

► Cronus®:

- Excellent thermal performance of 0.024 W/mK
- Easy to clean and maintain
- Light and easy to install

| Thickness (mm) | 30 | 40 | 50 | 60 | 80 |
|------------------------|------|------|------|------|------|
| R _D (m²K/W) | 1.25 | 1.65 | 2.05 | 2.50 | 3.30 |

► Your solution for easy cleaning and maintenance

Cronus® is made especially for the agricultural sector. Taking into account the importance of hygiene, the boards are corrosion resistant and have a robust facing (not glued) that makes it possible to clean your walls and ceiling with a high-pressure cleaner. By insulating under the purlins, the ceiling can be cleaned in a short time.

► Mounting and easy installation

The insulation boards are light and easy to install which means you can install the insulation rapidly. We recommend installing the boards under the purlins to obtain a flat, continuous ceiling.

This way, you will experience a good ventilation in the stables. Cronus® boards also have a bright finish that gives a pleasant light diffusion in the shed.

- Available in different lengths (fewer joints).
- Use Cronus® with Recticel Insulation PVC profiles: Profisol H profiles and Profisol U profiles.
- Mount the boards under the purlins to produce a nice flat, continuous roof.
