—
**Excellent thermal
performance** with
less thickness
—

—
Easy to install
single-board
solution
—

Du.Panel X is a deluxe thermal insulation board for pitched roofs in agricultural buildings. It is specially developed to achieve the optimal balance between two vital characteristics: the highest possible energy savings alongside advanced fire performance. As a result, it offers farmers the ultimate protection for their business.

With a **lambda value of 0.020 W/mK**, the layer of insulation needed is extremely thin. This gives architects unprecedented opportunities to maximise space in the building and reduce the weight of the roof construction. The indoor climate created by Du.Panel X is stable and controlled, allowing farmers to save on energy costs while optimising indoor conditions and controlling their profits.

This excellent thermal performance is complemented by **Euroclass B fire classification**. As well as promoting the highest safety standards, this ensures regulatory compliance now and in the future, as requirements become stricter.

Du.Panel X is supplied as a convenient, single-board solution to **make installation easy**. Its finely-tuned combination of technical characteristics creates the best all-round protection for a wide range of agricultural businesses.
